

Triṃśikā translation evaluation

Thank you! You are comparing three anonymous machine translation systems (A/B/C — the assignment changes every verse) on the 30 verses of Vasubandhu's Triṃśikā. A published human translation is shown as reference; you may also rely on your own reading of the Sanskrit. The reference translates the vulgate text, which occasionally differs from the bhāṣya reading shown (e.g. v.13 uddhataḥ vs uddhavaḥ).

For each verse, answer three questions (write A, B, C, or `tie`; add `-` if none is acceptable):

1. term_fidelity — Which system best renders the technical terms as the Yogācāra tradition understands them (e.g. vipāka, vijñapti, ālaya, upādi, parāvṛtti)? Generic dictionary glosses that miss the technical sense count against a system.
2. compound_resolution — Which system best resolves the compounds (correct member division, correct relation — e.g. bahuvrīhi vs tatpuruṣa — and correct construal in context)?
3. overall — Which translation is the most faithful rendering of the verse overall (accuracy first, fluency second)?

Record your answers in the provided answer sheet (one row per verse) and add free comments wherever a system does something notably right or wrong. Expected effort: 3–6 hours.

Verse 1

Sanskrit (bhāṣya reading): ātmadharmopacāro hi vividho yaḥ pravartate vijñānapariṇāme 'sau pariṇāmaḥ sa ca tridhā

Reference (human): The manifold approximation, such as "self" and "dharma", that goes on, refers to the transformation of consciousness, and that transformation is threefold:

- A. The various metaphorical designations of "self" and "phenomena" that arise do so within the transformation of consciousness, and that transformation is threefold.
 - B. For, in world and śāstra, the manifold figurative imputation (upacāra) of self (ātman) and dharmas (dharma) that is current—
this is upon the transformation of consciousness (vijñāna-pariṇāma);
and that transformation (pariṇāma) is threefold.
 - C. Indeed, the manifold conventional designation of self and dharmas that arises occurs in the transformation of consciousness; and that transformation is threefold.
-

Verse 2

Sanskrit (bhāṣya reading): vipāko mananākhyāś ca vijñaptir viṣayasya ca tatrālayākhyam
vijñānam vipākaḥ sarvabījakaḥ

Reference (human): maturation; the one called "thinking"; and the cognition of a domain. Among these, the consciousness called ālaya is the maturation, and contains all the seeds.

A. [The three transformations of consciousness are] maturation, that which is called mentation, and the representation of objects. Among these, the consciousness known as the ālaya (storehouse) is the maturation, which contains all seeds.

B. It is maturation, that called mentation, and the representation of objects; among these, the consciousness called the storehouse is maturation, containing all seeds.

C. The transformation is threefold:

maturation-result (vipāka), the one called mentation (manana),
and presentation of an object (viṣaya-vijñapti).

Among these, the consciousness called the storehouse (ālaya)
is the maturation-result, all-seeded (sarvabījaka).

Verse 3

Sanskrit (bhāṣya reading): asaṃviditakopādīsthānavijñaptikaḥ ca tat sadā
sparśamanaskāravitsaṃjñācetanānvitam

Reference (human): In it, clinging, and the cognition of a locus, are not cognized; it is always accompanied by contact, mental placement, feeling, notion and intention.

A. It is characterized by representations of the environment and of appropriation that are not consciously perceived, and it is always accompanied by contact, attention, feeling, perception, and volition.

B. And that storehouse consciousness (ālayavijñāna)
has unapprehended appropriation (upādi)
and an unapprehended place-presentation (sthānavijñapti);
for as long as it is, it is accompanied
by contact (sparśa), attention (manaskāra), feeling (vedanā),
recognition (saṃjñā), and volition (cetanā).

C. It has an unperceived representation of appropriation and place, and is always accompanied by contact, attention, feeling, perception, and volition.

Verse 4

Sanskrit (bhāṣya reading): upekṣā vedanā tatrānivr̥tāvyākṛtaṁ ca tat tathā sparśādayaḥ tac ca
vartate srotasaughavat

Reference (human): In it, feeling is neutral. It is unobstructed and undetermined, and so are contact, etc.;
it goes on in a flow, like a stream.

A. There, in the store-consciousness (ālayavijñāna),
the feeling (vedanā) is equanimity (upekṣā);
and that [store-consciousness] is unobscured-indeterminate (anivr̥tāvyākṛta).
Contact and the rest (sparśādayaḥ) are likewise;
and this [store-consciousness] goes on, in a stream-continuum (srotas), like a flood (ogha).

B. In that state, the feeling is equanimity, which is both unobscured and morally indeterminate;
mental contact and the other associated factors are likewise. Its continuity proceeds like the current of
a flowing stream.

C. In it, feeling is neutral; it is unobscured and morally indeterminate, and so too are contact and the
other mental factors. It flows on like a current.

Verse 5

Sanskrit (bhāṣya reading): tasya vyāvṛttir arhattve tad āśritya pravartate | tadā lambaṁ manonāma
vijñānaṁ mananātmakam

Reference (human): Its cessation comes about at the state of an Arhat; on its basis, there comes forth a
consciousness called "thought", having the former as its support, and having the nature of thinking;

A. Its cessation occurs at the stage of the arhat. Depending upon that [store-consciousness] as its
support and taking it as its object, there functions the consciousness known as manas, which is
characterized by the nature of mentation.

B. It ceases in the state of arhatship. Depending on it and taking it as its object, there arises the
consciousness called manas, whose nature is mentation.

C. Its cessation is in arhatship (arhattva).
Relying on that—the storehouse consciousness (ālayavijñāna)—it proceeds.
Having that as its object-support (ālambana),
it is a consciousness (vijñāna) named mind (manas),
whose nature is cogitation (manana).

Verse 6

Sanskrit (bhāṣya reading): kleśaiḥ caturbhiḥ sahitam nivṛtāvyākṛtaiḥ sadā
ātmadrṣṭyātmamohātmamānātmāsnehasaṃjñitaiḥ

Reference (human): it is always accompanied by four afflictions, obscured and undetermined, called: view of self, delusion of self, presumption of self, affection towards the self.

A. Always, so long as it exists, this [mind (manas)]
is conjoined (saṃprayukta) with four obscured-neutral afflictions
(kleśa; nivṛtāvyākṛta):
those called self-view (ātmadrṣṭi), delusion about self (ātmamoha),
self-conceit (ātmamāna), and self-love/attachment (ātmāsneha).

B. It is always accompanied by four afflictions that are obscured and morally indeterminate, known
as the view of self, the delusion of self, the pride of self, and the love of self.

C. It is always accompanied by four afflictions, obscured and indeterminate: self-view, self-delusion,
self-conceit, and self-love.

Verse 7

Sanskrit (bhāṣya reading): yatrajas tanmayair arhato na tat | na nirodhasamāpattau mārge
lokottare na ca

Reference (human): Wherever one is born, they correspond to that level; it also has others, contact, etc.;
it does not exist for an Arhat, nor during the absorption of cessation, nor in the supramundane path:

A. Wherever it is born, it is associated only with factors of that same realm (dhātu) and level (bhūmi);
for an arhat, that defiled mind (kliṣṭam manas) is not.
Nor is it present in cessation-attainment (nirodha-samāpatti),
nor on the supramundane path (lokottara-mārga).

B. Wherever it arises, it is conjoined with factors of the same nature, such as contact; yet it does not
exist in the Arhat, nor in the attainment of cessation (nirodhasamāpatti), nor in the supramundane
path (lokottaramārga). (Some versions omit the initial clause regarding birth and contact, focusing
exclusively on the absence of the afflicted manas in these three states.)

C. Arising on whatever plane, it is accompanied by factors belonging to that plane; it is not present in
the arhat, nor in the attainment of cessation, nor on the supramundane path.

Verse 8

Sanskrit (bhāṣya reading): dvitīyaḥ pariṇāmo 'yam tṛtīyaḥ ṣaḍvidhasya yā | viśayasyopalabdhiḥ
sā kuśalākuśalādvayā

Reference (human): this is the second transformation. The third is the perception of the sixfold domain, and it can be virtuous, non-virtuous, or neither.

A. This is the third transformation of consciousness, which consists of the perception of six kinds of objects; it may be wholesome, unwholesome, or indeterminate.

B. This is the second transformation. The third is the apprehension of the sixfold object; it is wholesome, unwholesome, or neither.

C. This is the second transformation (pariṇāma).
The third consciousness-transformation (vijñāna-pariṇāma)
is whatever apprehension (upalabdhi) there is
of the sixfold object (viśaya):
that is wholesome (kuśala), unwholesome (akuśala),
or neither—the undetermined (advayā/avyākṛta).

Verse 9

Sanskrit (bhāṣya reading): sarvatragair viniyataiḥ kuśalaiś caitasair asau | saṃprayuktā tathā
kleśair upakleśais trivedanā

Reference (human): It is joined by the omnipresent mental states; by those of delimited occurrence; by virtuous ones; by afflictions; and by secondary afflictions. It has three types of feeling.

A. With universal (sarvatraga), determinate (viniyata),
and wholesome mental factors (caitasa), this [apprehension] is conjoined;
likewise with afflictions (kleśa) and secondary afflictions (upakleśa):
it has three feelings (tri-vedanā).

B. It is associated with the omnipresent, the object-determined, and the wholesome mental factors, as well as with the primary and secondary afflictions, and it is accompanied by the three types of feeling.

C. It is associated with the omnipresent, the determinate, and the wholesome mental factors, as well as with the afflictions and secondary afflictions, and it has the three kinds of feeling.

Verse 10

Sanskrit (bhāṣya reading): adyāḥ sparśādayaḥ chandādhimokṣasmṛtayaḥ saha | samādhidhībhyāṃ
niyatāḥ śraddhātha hrīr apatrapā

Reference (human): The first are contact, etc. Zest, conviction and mindfulness, plus samādhi and wisdom, are the delimited; faith, modesty, shame,

- A. The initial ones (ādyāḥ)—those beginning with contact (sparśa)—are the omnipresent (sarvatraga); desire (chanda), resolve (adhimokṣa), and mindfulness (smṛti), together with concentration (samādhi) and discernment (dhī/prajñā), are the object-specific determinate factors (niyata/viniyata); then come faith (śraddhā), shame (hrī), and compunction (apatrapā).
- B. The first are contact and the rest; desire, resolve, and mindfulness, together with concentration and discernment, are the specific ones; then come faith, shame, and moral scruple.
- C. The first [group of mental factors] consists of contact and the rest. The specific factors are desire, resolve, and mindfulness, together with concentration and wisdom. Then follow the wholesome factors: faith, conscience, and a sense of shame.
-

Verse 11

Sanskrit (bhāṣya reading): alobhāditrayaṃ vīryaṃ praśrabdhiḥ sāpramādikā | āhiṃsā kuśalāḥ
kleśā rāgapratighamūḍhayaḥ

Reference (human): the three starting from non-greed, heroism, ease, that which comes with non-heedlessness, and non-harming, are the virtuous. The afflictions are attraction, aversion and delusion,

- A. The triad beginning with non-greed, along with vigor, serenity, heedfulness, and non-violence, constitute the wholesome factors; the afflictions are attachment, aversion, and delusion.
- B. The triad beginning with non-greed (alobha)—non-greed, non-hatred (adveṣa), non-delusion (amoha)—energy in the wholesome (vīrya), pliancy (praśrabdhi), equanimity (upekṣā) together with heedfulness (apramāda), and non-harming (ahiṃsā, glossed avihiṃsā): these complete the wholesome factors (kuśala). The afflictions (kleśa) are attachment (rāga), aversion (pratigha), and delusion (mūḍhi).
- C. Non-greed, non-hatred, and non-delusion, energy, pliancy, heedfulness, and non-harming are wholesome; the afflictions are attachment, aversion, and delusion.
-

Verse 12

Sanskrit (bhāṣya reading): mānadṛgvicikitsāś ca mrakṣaḥ pradāśa īrṣyātha mātsaryaṃ saha māyayā

Reference (human): presumption, view, doubt. Furthermore, anger and grudge, dissimulation, biting, envy, stinginess, illusionism,

A. Conceit (māna), the afflictive views (dṛg), and doubt (vicikitsā); concealment (mrakṣa), spite (pradāśa), envy (īrṣyā)—then stinginess (mātsarya), together with deceit (māyā).

B. Conceit, wrong views, and doubt; concealment, spite, jealousy, then stinginess, together with deceit.

C. Pride, wrong views, and doubt, along with concealment, spite, jealousy, and avarice, together with deceit. (Note: While the Sanskrit source provided focuses on the latter list, the broader canonical context often includes anger and hostility as preceding elements in this sequence of secondary afflictions.)

Verse 13

Sanskrit (bhāṣya reading): śāṭhyaṃ mado 'vihimsāhrīr atrapā styānam uddhataḥ āsraddhyaṃ atha kausīdyaṃ pramādo muṣitā smṛtiḥ

Reference (human): deceitfulness, intoxication, harming, non-modesty, non-shame, sloth, excitement, non-faith, laziness, heedlessness, deceived mindfulness,

A. Deceitful crookedness (śāṭhya), self-intoxicated pride (mada), harmfulness (vihimsā); shamelessness in oneself (ahrī/āhrīkya), no compunction before others (atrapā/anapatrāpya), torpor (styāna), restlessness (auddhatya); then faithlessness (āsraddhya), sloth (kausīdya), heedlessness (pramāda), and corrupted mindfulness—afflicted mindfulness (muṣitā smṛtiḥ).

B. Deception, intoxication, harmfulness (some versions read ahrī and anapatrāpya as distinct qualities of shamelessness and lack of moral dread), shamelessness, lack of moral dread, lethargy, restlessness, lack of faith, indolence, heedlessness, and lapsed mindfulness.

C. Deceit, vanity, cruelty, shamelessness, lack of moral restraint, torpor, agitation, faithlessness, laziness, heedlessness, and forgetfulness.

Verse 14

Sanskrit (bhāṣya reading): vikṣepo 'saṃprajanyaṅ ca kauṛṭyaṃ middham eva ca | vitarkaś ca vicāraś cety upakleśā dvaye dvidhā

Reference (human): scatteredness, lack of discerning awareness, what derives from bad deeds, torpor, deliberation and analysis, are the secondary afflictions. The two pairs are twofold.

A. Distraction, lack of clear awareness, remorse, drowsiness, initial thought, and examination—these are secondary afflictions; the two pairs are twofold.

B. Distraction, lack of introspection, regret, drowsiness, as well as initial thought and sustained thought—these are the secondary afflictions, the latter two of which are of two kinds (some traditions classify these as indeterminate, whereas others categorize them strictly as secondary afflictions).

C. Distraction (vikṣepa), lack of clear comprehension (asaṃprajanya), regret (kauṛṭya), and torpor (middha) too; searching inner speech (vitarka) and examining inner speech (vicāra): secondary afflictions (upakleśa).

The two dyads—regret/torpor and searching/examining—are twofold; only their defiled forms count as such.

Verse 15

Sanskrit (bhāṣya reading): pañcānāṃ mūlavijñāne yathāpratyayam udbhavaḥ | vijñānānāṃ saha na vā taraṅgāṇāṃ yathā jale

Reference (human): The arising of the five consciousnesses [sic] in the root consciousness is according to conditions; it may occur together or not, just like the arising of waves on water.

A. Based in the root consciousness (mūlavijñāna, the ālayavijñāna), the five consciousnesses (vijñāna)—eye and the rest, with attendant mind-consciousness (manovijñāna)—come into being (udbhava) according to the condition present (yathāpratyayam): together, or not together, as waves [arise] in water.

B. The five consciousnesses arise from the root consciousness according to their respective conditions; they may manifest either simultaneously or separately, just as waves arise upon the water.

C. The five consciousnesses arise in the root consciousness according to conditions, together or separately, like waves in water.

Verse 16

Sanskrit (bhāṣya reading): manovijñānasambhūtiḥ sarvadāsaṃjñikād ṛte | samāpattidvayān
middhān mūrccanād apy acittakāt

Reference (human): The thought-consciousness always comes about, except for: the notionless, the two attainments, mind-less torpor and swoon.

A. Mental consciousness arises at all times, except among the non-percipient beings, in the two meditative attainments, in deep sleep, in fainting, and in other mindless states.

B. The mental consciousness arises at all times, except in the state of non-perception, the two meditative attainments, deep sleep (or torpor), and fainting, which are devoid of thought.

C. The arising of mental consciousness (manovijñāna)
is at all times—whether with the eye-consciousnesses and the rest, or without them—
except in the unconscious state (āsaṃjñika),
in the two attainments (samāpatti-dvaya),
in mindless torpor (acittaka middha),
and also in mindless fainting (mūrccā).

Verse 17

Sanskrit (bhāṣya reading): vijñānapariṇāmo 'yaṃ vikalpo yad vikalpyate | tena tan nāsti tenedaṃ
sarvaṃ vijñāptimātrakaṃ

Reference (human): This transformation of consciousness is a concept. What is conceptualized by it, does not exist: therefore, all of this is cognition-only.

A. This transformation of consciousness is conceptual construction; what is constructed by it does not exist. Therefore all this is mere representation.

B. This transformation of consciousness is conceptual construction, and that which is constructed by it does not exist. Therefore, all of this is representation-only.

C. This transformation of consciousness (vijñānapariṇāma) is conceptual construction (vikalpa):
whatever object is imagined by it—that is not there.
Therefore all this is representation-only (vijñāptimātraka),
'all' meaning the three realms and the unconditioned.

Verse 18

Sanskrit (bhāṣya reading): sarvabījaṃ hi vijñānaṃ pariṇāmas tathā tathā | yāty anyonyavaśād
yena vikalpaḥ sa sa jāyate

Reference (human): The consciousness which contains all the seeds reaches manifold ways of transformation, due to mutual influence; due to this, the concept arises in manifold ways.

A. Consciousness contains all seeds, and its transformation proceeds in various ways through mutual influence, whereby such and such conceptual constructions arise.

B. For consciousness contains all seeds; its transformation proceeds in various ways through mutual influence, and from this arises this or that conceptual construction.

C. For consciousness—store-consciousness (ālayavijñāna)—is all-seeded (sarvabīja):
by mutual influence its transformation (pariṇāma)
reaches such-and-such states,
and thereby this or that construction (vikalpa) arises.

Verse 19

Sanskrit (bhāṣya reading): karmaṇo vāsanā grāhadvayavāsanayā saha | kṣīṇe pūrvavipāke 'nyam
vipākaṃ janayanti tat

Reference (human): The perfumings from karma, together with the imprint of two types of grasping, when the previous maturation has vanished produce another maturation.

A. The karmic impressions (karmavāsanāḥ), together with the impression of the twofold grasping (grāhadvayavāsanā),
when the previous maturation (pūrvavipāka) has been exhausted,
generate that—ālaya-consciousness (ālayavijñāna)—as another maturation (vipāka).

B. The latent impressions of karma, together with the impressions of the twofold grasping, generate another maturation when the previous maturation has been exhausted.

C. The habit-energies (vāsanā) of actions, together with the habit-energies of twofold grasping, generate a subsequent maturation once the previous maturation has been exhausted.

Verse 20

Sanskrit (bhāṣya reading): yena yena vikalpena yad yad vastu vikalpyate | parikalpita evāsau svabhāvo na sa vidyate

Reference (human): By whichever concept such and such a thing is conceptualized, that thing is only a thoroughly imagined own-existence: it does not exist.

A. Whatever thing is imagined by whatever conceptual construction is only the imagined nature; it does not exist.

B. By whatever conceptual construction (vikalpa),
whatever object is construed,
that nature (svabhāva) is just the imagined (parikalpita);
it is not found to exist.

C. Whatever object is conceptualized by whatever conceptual construction, that is merely the imagined nature; it does not exist.

Verse 21

Sanskrit (bhāṣya reading): paratantrasvabhāvas tu vikalpaḥ pratyayodbhavaḥ niṣpannas tasya pūrveṇa sadā rahitatā tu yā

Reference (human): The other-dependent own-existence, on the other hand, is the concept, arisen due to conditions. The accomplished is the latter's being always bereft of the former.

A. The dependent nature (paratantra-svabhāva) is conceptualization arising from conditions, while the perfected nature (niṣpanna) is that very state eternally devoid of the former (imagined) nature.

B. The dependent nature, however, is conceptual construction arising from conditions; the perfected nature is its perpetual absence of the former.

C. But the dependent nature (paratantra-svabhāva)
is construction (vikalpa), born of conditions (pratyaya).
The perfected nature (pariniṣpanna-svabhāva) is
its always being devoid of the former—
the imagined grasper-and-grasped.

Verse 22

Sanskrit (bhāṣya reading): ata eva sa naivānyo nānanyaḥ paratantrataḥ anityatādivad vācyo
nādr̥ṣṭe 'smin sa dr̥śyate

Reference (human): Precisely due to this, it is neither other nor not other than the other-dependent. It should be explained just like impermanence, etc. That is not seen as long as this is not seen.

A. For this very reason, it is to be said to be neither different from nor identical with the dependent nature, like impermanence and the like; when this is not seen, that is not seen.

B. Therefore, in relation to the dependent nature (paratantra), it is to be described as neither different nor non-different, much like the nature of impermanence and the like; for when the one is not perceived, the other is not perceived (some versions imply that when the dependent nature is not seen, the nature of reality is not seen).

C. For just this reason, it is neither different nor non-different from the other-dependent (paratantra); as with impermanence and the rest, it is to be so stated.
When this perfected nature (pariniṣpanna) has not been seen,
that other-dependent nature is not seen.

Verse 23

Sanskrit (bhāṣya reading): trividhasya svabhāvasya trividhām niḥsvabhāvatām | sandhāya
sarvadharmāṇāṃ deśitā niḥsvabhāvatā

Reference (human): The lack of own-existence of all the dharmas was taught intending to refer to the threefold lack of own-existence of the threefold own-existence.

A. With reference to the threefold lack of intrinsic nature in the threefold nature, the lack of intrinsic nature of all phenomena was taught.

B. Having in view the threefold absence of own-nature (niḥsvabhāvatā) of the threefold own-nature (svabhāva),
the absence of own-nature of all dharmas (sarvadharmāḥ) was taught—
dharmas whose nature is imagined, dependent, and perfected.

C. With reference to the three kinds of intrinsic nature and their corresponding three kinds of non-self-nature, the non-self-nature of all phenomena has been taught.

Verse 24

Sanskrit (bhāṣya reading): prathamo lakṣaṇenaiva niḥsvabhāvo 'paraḥ punaḥ na svayambhāva
etasyetye aparā niḥsvabhāvatā

Reference (human): The first has no own-existence just in terms of its defining trait; while for the next, it means that it has no coming into existence on its own accord. There is another type of own-existence-less-ness:

A. The first is without intrinsic nature by its very characteristic; the other, again, because it does not arise by itself—this is another absence of intrinsic nature.

B. The first—the imagined nature (parikalpita-svabhāva)—is natureless (niḥsvabhāva) by its defining-character (lakṣaṇa) alone.

The other—the dependent nature (paratantra-svabhāva)—again has no self-arising; “there is no self-arising of this”: that is the other naturelessness (niḥsvabhāvatā).

C. The first is natureless by its very characteristic; the second, moreover, lacks self-origination, which constitutes the other absence of intrinsic nature.

Verse 25

Sanskrit (bhāṣya reading): dharmāṇāṃ paramārthaś ca sa yatas tathatāpi saḥ sarvakālaṃ
tathābhāvāt saiva vijñaptimātratā

Reference (human): due to being the ultimate of the dharmas; it is also thusness, being thus at all time; that itself is cognition-only-ness.

A. It is the ultimate reality of all phenomena, and therefore it is also suchness; because it is such at all times, it is itself mere cognition.

B. Since that [perfected nature (pariṇiṣpanna-svabhāva)] is the ultimate reality (paramārtha) of dharmas (dharma), it too is suchness (tathatā); for at every time it is just so—that very suchness is representation-only-ness (vijñaptimātratā).

C. This is the ultimate reality of all phenomena; because it is so, it is also Suchness (tathatā). Since it remains thus at all times, it is itself the state of Consciousness-Only (vijñaptimātratā).

Verse 26

Sanskrit (bhāṣya reading): yāvad vijñaptimātratve vijñānaṃ nāvatiṣṭhate | grāhadvayasyānuśayas
tāvan na vinivartate

Reference (human): As long as consciousness does not remain in cognition-only-ness, for that long the insidious growth of the two types of grasping does not cease.

A. As long as consciousness does not abide in mere representation, the latent tendency toward the twofold grasping does not cease.

B. So long as the yogin's consciousness (vijñāna) does not abide in representation-only (vijñaptimātratva), so long the latent seed (anuśaya) of the twofold grasping (grāhadvaya)—grouting grasped object and grasper—does not cease.

C. As long as consciousness does not abide in the state of representation-only, the latent tendency toward the twofold grasping does not cease.

Verse 27

Sanskrit (bhāṣya reading): vijñaptimātram evedam ity api hy upalambhataḥ | sthāpayann agrataḥ
kiñcit tanmātre nāvatiṣṭhate

Reference (human): Since by perceiving even that "this is only just cognition", one is placing something in front, one is not remaining in that only.

A. Even if one perceives that "this is only cognitive representation," as long as one posits something as an object before oneself, one does not truly abide in the state of mere representation.

B. Even while holding, "This is mere representation only," one does not abide in that mere representation, for one still apprehends something set before oneself.

C. For even as he apprehends—grasps and pictures—
"This is mere representation (vijñapti-mātra) alone,"
mentally setting some support (ālambana) before him,
he does not abide in that mere [representation] (tanmātra).

Verse 28

Sanskrit (bhāṣya reading): yadā tv ālambanaṃ jñānaṃ naivopalabhate tadā | sthitaṃ
vijñaptimātratve grāhyābhābhāve tadagrahāt

Reference (human): On the other hand, when awareness does not apprehend a support, then it is placed within consciousness-only-ness, since in the absence of an object to be grasped, it does not grasp that.

A. But when cognition no longer apprehends an object, then it is established in mere representation, since, in the absence of what is grasped, there is no grasping of it.

B. When cognition (jñāna), however, does not at all apprehend an object-support (ālambana) outside mind, then it stands established in representation-only (vijñaptimātratva): for, when the graspable-appearance (grāhyābhā) is absent, there is no grasping of that.

C. When cognition no longer apprehends an object of dependence, it abides in the state of representation-only, for in the absence of a graspable object, there is no grasping (of a subject).

Verse 29

Sanskrit (bhāṣya reading): acitto 'nupalambo 'sau jñānaṃ lokottaraṃ ca tat āśrayasya parāvṛttir
dvidhādauṣṭhulyahānitaḥ

Reference (human): That is the mind-less non-perception; it is supramundane awareness; it is the revolution of the basis, thanks to the destruction of the twofold badness.

A. It is without mind, without apprehension; and that is supramundane knowledge—the transformation of the basis through the abandonment of the twofold affliction.

B. It is without grasping mind (acitta), non-apprehension (anupalamba); and that is world-transcending knowledge (lokottara-jñāna). Then comes the turning-about of the basis (āśraya-parāvṛtti), through the abandonment of the twofold unwieldiness (daṣṭhulya).

C. That state is devoid of mind and free from apprehension; it is supramundane wisdom, and the transformation of the basis occurs through the twofold abandonment of coarseness (or, alternatively, the twofold abandonment of the two types of defilement).

Verse 30

Sanskrit (bhāṣya reading): sa evānāsravo dhātur acintyaḥ kuśalo dhruvaḥ | sukho vimuktikāyo
'sau dharmākhyo 'yaṃ mahāmuneḥ

Reference (human): That itself is the dhātu without fluxes, inconceivable, virtuous, permanent; it is the blissful body of liberation, and this is called "Dharma" for the Great Muni.

A. That very basis-transformation (āśraya-parāvṛtti) is the uncontaminated element-source (anāsrava dhātu)—

inconceivable, wholesome, constant, blissful.

That, for the śrāvakas, is the liberation-body (vimuktikāya);

this, of the Great Sage (mahāmuni), is called the Dharma-body (dharmakāya).

B. That very state is the undefiled realm, inconceivable, wholesome, constant, and blissful; it is the body of liberation, called the Dharma-body of the Great Sage.

C. That very realm is untainted, inconceivable, wholesome, and constant; it is bliss and the body of liberation, which the Great Sage has termed the Dharma-body.
